Learning Communities consist of two courses linked together where you are with the same students in both classes, explore common themes, build partnerships with professors and peers, and participate in rewarding community engagement projects.

Learning Communities are different from other classes in that they are scheduled back to back, usually in the same room, with the same students in both classes. The professors of each class work together to integrate material in ways that show the connections between the two courses. This makes the material more engaging, interactive, and easy to remember and retain.

“Sigmund Freud once posed the question: Where does a thought go when it’s forgotten?” In Freud’s time, there was no answer to that question, nor was there a way to find an answer. Now, we have brain scanners that let us know what’s happening in the brain as we remember and forget. All of what we know about human behavior starts with a question—often one that can’t be answered at the time. Our learning community will explore human behavior through student questions, and then we will find as many answers as we can!

-Jessica C. Hill, Psychology Professor
